# **TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO**

## **1.0 INTRODUCTION AND PROPOSED DEVELOPMENT INFORMATION**

### **1.1 BACKGROUND**

Stantec Consulting Ltd. was retained by Waterstone Anderdon Development (“the Client”) to complete a Traffic Impact Study (“TIS”) in support of a proposed residential subdivision development application for the approval from Essex County (“the County”) and Town of Amherstburg (“the Town”). This proposed development is located east of Front Road North and north of Texas Road in Amherstburg, Essex County, Ontario.

### **1.2 STUDY GOAL AND SCOPE**

The goal of this TIS is to assess the potential impacts of traffic generated by this development to the surrounding roadway network and identify any required improvements to ensure that the roadway facilities can safely and efficiently accommodate this proposed project.

The scope of the work of this TIS includes:

- Collecting traffic data within the study area including Turning Movement Count (“TMC”) data at the selected study intersections
- Establishing existing traffic and projected future background traffic volumes at the study intersections in different selected horizon years
- Determining the total number of new trips generated by the proposed development
- Establishing trip distribution and assignment for trips generated by the proposed developments
- Carrying out intersection capacity analysis at the study intersections in different horizon years to identify any potential traffic issues and determine roadway, intersections, and access requirements
- Recommending potential improvements in terms of intersection geometry and control to provide acceptable conditions, if required
- Carrying out site access analyses, including an access spacing review, an access sightline review and a site swept path analysis
- Carrying out a parking review
- Preparing a final TIS report to document the analysis undertaken and the findings and recommendations of the study

# **TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO**

## **Analysis Horizons**

Three horizon years were selected and analyzed in this TIS.

- Existing Traffic Conditions (2022)
- Site Full Buildout Year (2024)
- 5-Year Horizon after Site Buildout (2029)

The analysis periods selected for this study are the weekday morning and afternoon peak hours as they are expected to represent the highest traffic volumes.

## **Study Intersections**

This TIS includes the following three study intersections:

- Front Road North and Texas Road (signalized)
- Front Road North and Kingsbridge Drive (signalized)
- Front Road North and Proposed Future Development Access Road (unsignalized)

# TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

## 2.0 SITE CONTEXT

### 2.1 SITE/DEVELOPMENT DESCRIPTION

This proposed residential subdivision development site is located east of Front Road N, north of Texas Road and south of Kingsbridge Dr. in Amherstburg, Essex County, Ontario. The site location and study intersections, as well as the existing roadway network in the study area, are shown in **Figure 2.1**.

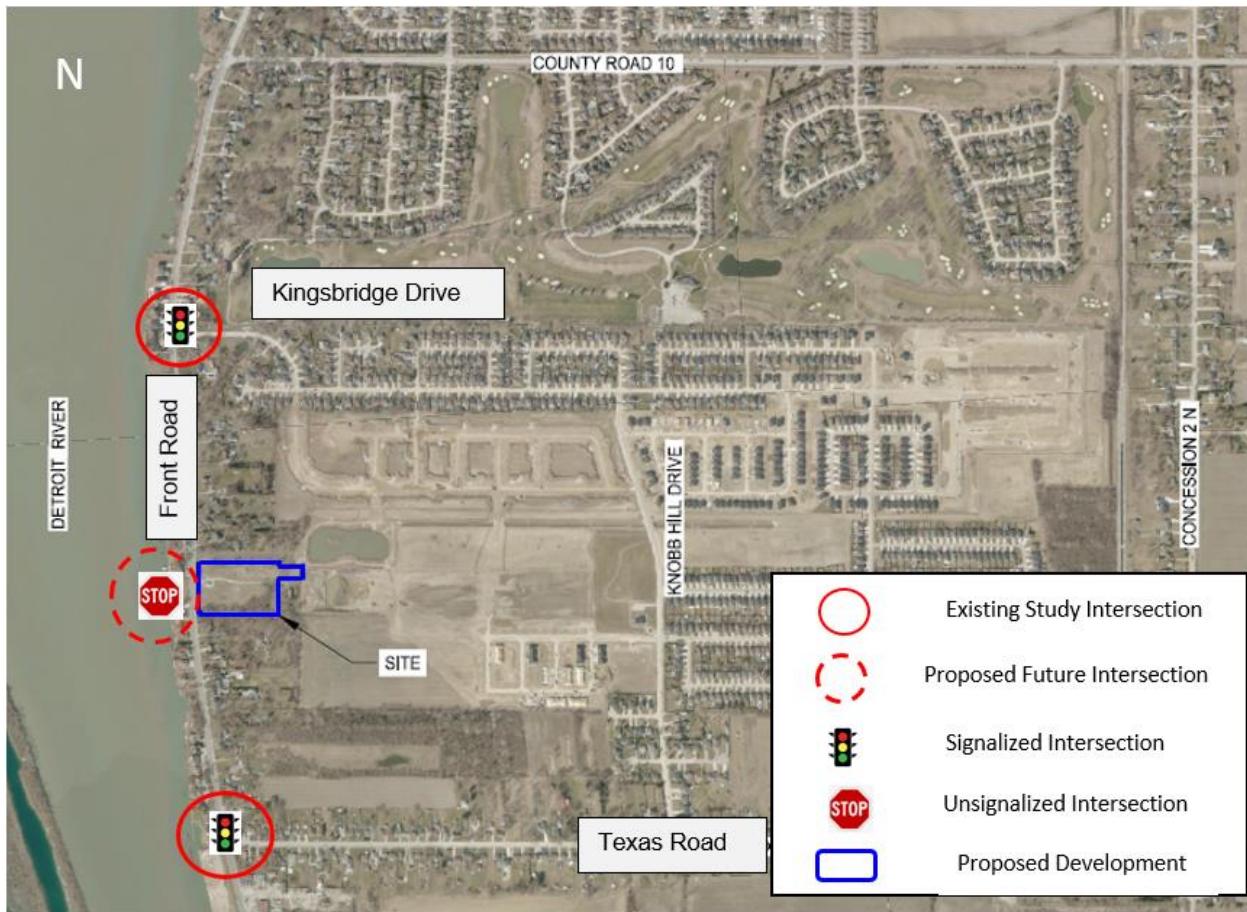

Figure 2.1 – Site Location and Study Intersections

# TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

## 2.2 EXISTING ROADWAY NETWORK

The existing roadway network adjacent to the site includes:

**Front Road North** is a north-south two-way road and is a segment of County Road 20. The road is under jurisdiction of the County of Essex and the posted speed limit is 70km/h.

**Texas Road** is an east-west two-way local road under jurisdiction of the Town of Amherstburg. The posted speed limit is 50km/h.

**Kingsbridge Drive** is an east-west two-way local road under jurisdiction of the Town of Amherstburg. Due to the absence of a posted speed limit, the statutory speed limit of 50km/h is assumed for analysis.

The existing study intersection lane configurations and traffic control are illustrated in **Figure 2.2**.

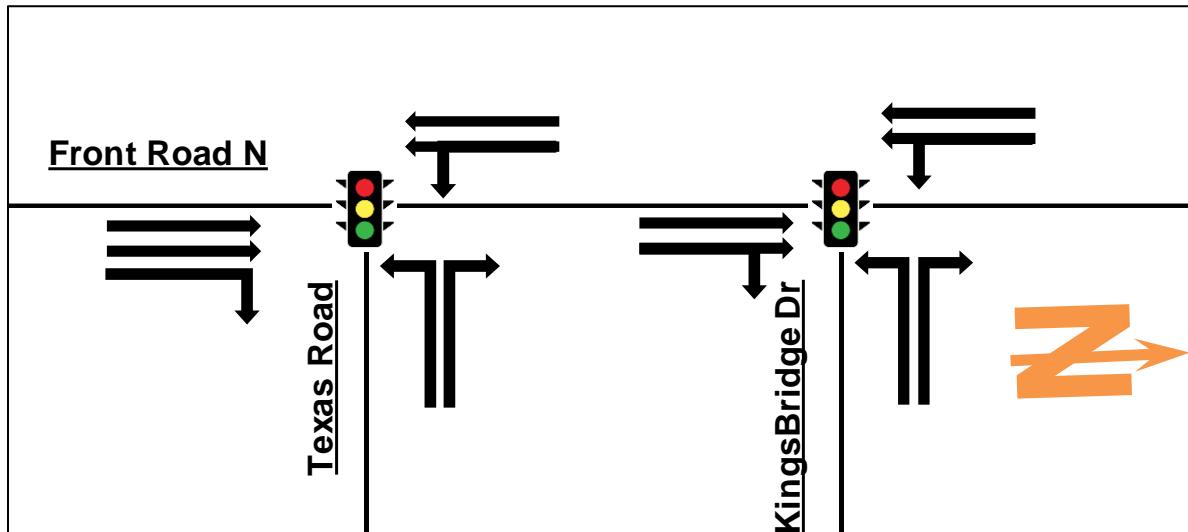

Figure 2.2 – Existing Lane Configurations and Traffic Control

## 2.3 EXISTING TRAFFIC DATA

### Data Collection

Through coordination with the County staff, the available data including the latest available traffic turning movement counts data ("TMCs") and the traffic signal timing plans ("STPs") for signalized intersections within the study area were provided by the County. The details of available TMCs and STPs were attached for reference in **Appendix A** and **Appendix B**, respectively.

## TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

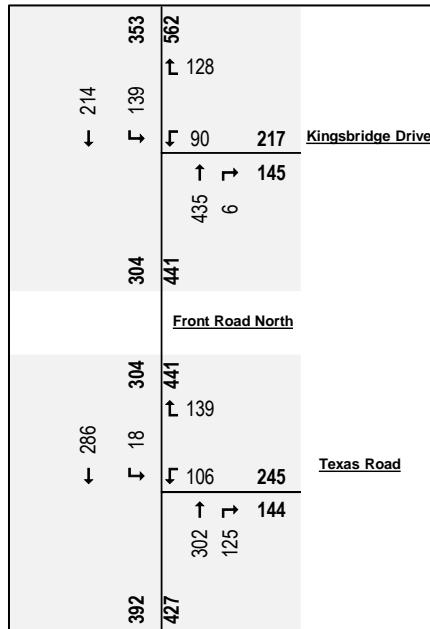

### Existing Traffic Volumes

The available traffic counts were dated to the year of 2021 for the study intersections. Due to the absence of 2022 TMCs at the intersections, an annual traffic growth rate was applied to the available traffic counts to establish the existing 2022 traffic volumes. As per the County's recommendation, an annual traffic growth rate of 2% was applied to all roadways of the study area in this study. It is noted that in this study, the traffic volumes along Front Road North between Texas Road and Kingsbridge Dr were balanced based on the higher volumes.

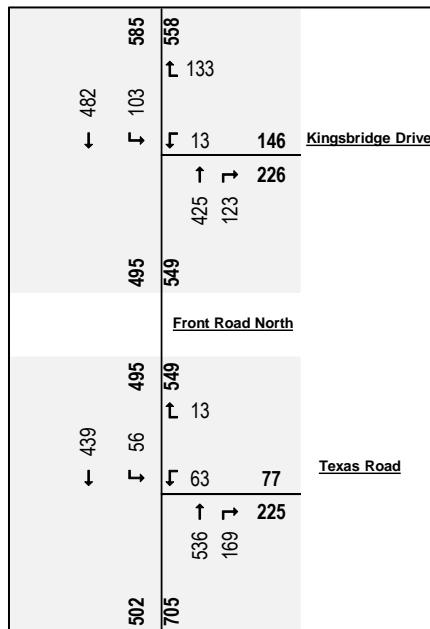

The existing base year 2022 traffic volumes for the AM and PM peak hours are illustrated in **Figure 2.3** and **Figure 2.4**.

**TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN  
AMHERSTBURG ONTARIO**

**Figure 2.3 – Existing 2022 Traffic Volume AM Peak Hour**

**Figure 2.4 – Existing 2022 Traffic Volume PM Peak Hour**

## 3.0 STUDY CONTEXT AND PROPOSED DEVELOPMENT

### 3.1 PROPOSED DEVELOPMENT AND ACCESSES

Based on the Overall Site Draft Plan shown in **Figure 3.1**, the proposed residential subdivision development will include 41 residential dwelling units with 28 apartment units, 12 semi-detached units (i.e., 6 one-storey duplexes) and 1 single-family home. The detailed Site Plan is attached in **Appendix C** for reference.

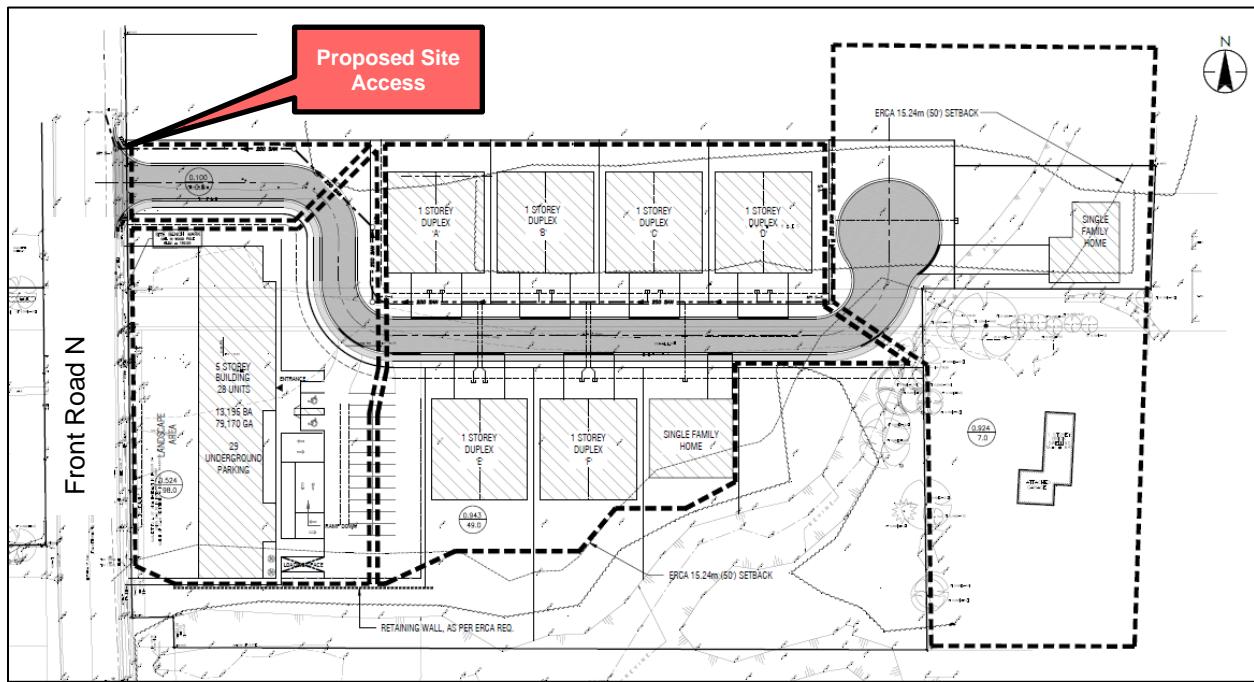

Figure 3.1 – Proposed Site Plan and Site Access

## 4.0 SITE GENERATED TRAFFIC

### 4.1 SITE TRIP GENERATION

Trip generation for the proposed uses on the site was calculated based on the Institute of Transportation Engineers (“ITE”) Trip Generation Manual, 11<sup>th</sup> Edition. **Table 4.1** summarizes the trip generation rates used for each land use. **Table 4.2** outlines the number of trips expected to be generated by the full buildout of the site for the AM and PM peak hours. It is to be noted that no trip reductions were applied for this development.

**Table 4.1 – Site Trip Generation Rates<sup>1</sup>**

Land Use	Peak Hour		Direction (%)		Source
	AM Peak Hour	PM Peak Hour	AM (In/Out)	PM (In/Out)	
Residential – Single Family Home	0.70 Trips/Dwelling Unit	0.94 Trips/Dwelling Unit	26%/74%	63%/37%	ITE LUC 210 – Single-Family Detached Housing
Residential – Apartment Units	0.37 Trips/Dwelling Unit	0.39 Trips/Dwelling Unit	23%,77%	61%, 39%	ITE LUC 221- Multifamily Housing (Mid-Rise)
Residential – Semi-Detached Housing	0.48 Trips/Dwelling Unit	0.57 Trips/Dwelling Unit	31%/69%	57%/43%	ITE LUC 215 – Single-Family Attached Housing

**Table 4.2 – Site Trip Generation Table (Peak Hour Traffic)**

Land Use	ITE Land Use Code	Independent Variable (x)	AM Peak Hour			PM Peak Hour		
			Trips	in	out	Trips	in	out
Single Family Home	210-Single-Famly Detached Housing	1 Dwelling Unit	1	0	1	1	1	0
Apartment Units	221-Multifamily Housing (Mid-Rise)	28 Dwelling Units	10	2	8	11	7	4
Semi Detached Units	215- Single Family Attached Housing	12 Dwelling Units	6	2	4	7	4	3
			Total	17	4	13	19	12
								7

<sup>1</sup> The rates in this table are ITE Trip Generation Manual 11<sup>th</sup> edition’s average rates.

# TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

## 4.2 TRIP DISTRIBUTION AND TRIP ASSIGNMENT

Trip distribution and assignment in this study for the site development were established based on the traffic patterns observed in the existing traffic counts during the AM and PM peak hours at the Front Road North & Kingsbridge Drive intersection based on its similar residential access function to the development access road, as well as the engineering judgement. It was assumed that the majority of the generated trips will be distributed to the Windsor area toward the north of the site. Trip distribution percentages are presented in **Table 4.3**. As shown in **Figure 3.1**, once the site is fully built out, all residential trips will connect to the off-site roadway network via the proposed access on Front Road North. Site Trip Distribution Percentages and Site Generated Traffic Volumes are illustrated in **Figure 4.1** and **Figure 4.2**.

**Table 4.3 –Trip Distribution Percentages**

		AM	PM
in	North	96%	90%
	South	4%	10%
out	North	90%	91%
	South	10%	9%

AMHERSTBURG ONTARIO**

**Figure 4.2 – Site Generated Traffic Volume**

## 5.0 FUTURE TRAFFIC VOLUMES

### 5.1 FUTURE BACKGROUND TRAFFIC VOLUMES

As per the County recommendation, a 2% of annual vehicular traffic growth rate was assumed to project future background traffic volumes in 2024 and 2029 in this study.

The future background traffic volumes for the 2024 and 2029 horizon years during the weekday AM and PM peak hours are shown through **Figure 5.1** to **Figure 5.4**.

### 5.2 FUTURE TOTAL TRAFFIC VOLUMES

The total traffic volumes are the summation of the future background traffic volumes and trips generated by the site. The total traffic volumes used for the analysis in the 2024 and 2029 horizon years are illustrated in **Figure 5.5** to **Figure 5.8**.

## 6.0 TRANSPORTATION ANALYSES

### 6.1 INTERSECTION CAPACITY ANALYSIS

#### 6.1.1 Intersection Capacity Analysis Assumptions

The quality of intersection operations at signalized and unsignalized intersections in this study is evaluated in terms of level of service (“LOS”) and volume to capacity (“V/C”) as defined by the Highway Capacity Manual (“HCM”). LOS for the intersection is based on the computed delays on each of the traffic movements. LOS ‘A’ represents minimal delays and LOS ‘F’ represents a scenario with significant vehicular delays. Capacity is evaluated in terms of the ratio of demand flow to capacity with an at-capacity condition represented by a V/C ratio of 1.00 (i.e., volume demand equals capacity).

The Intersection Capacity Analysis (“ICA”) was conducted by using the HCM 2000 methodology and specifically the traffic modeling software package of Synchro Studio 11 for different scenarios. The key parameters used in the analysis include:

- Existing lane configurations and traffic control
- Linked speeds as per posted speed limit
- Lane storage lengths as per lane storage lengths measured in Google
- Heavy vehicle percentages as derived from collected traffic count data
- Calculated peak hour factors (“PHFs”) for the study area intersections. It is noted that this factor adjusts the hourly volumes to better represent conditions during the peak 15 minutes of intersection operations
- Synchro default values for all other inputs

The following sections present the traffic performance for the study intersections relative to the above assumptions. If traffic operations exceed the thresholds, the corresponding Synchro results will be highlighted for further discussion. The following intersection performance criteria were used as thresholds for critical movements to assess traffic operations under existing and future conditions:

- The V/C is 0.85 or higher
- A level of service equal to “E” or “F”

#### 6.1.2 Analysis Results – 2022 Horizon (Existing Conditions)

The Synchro analysis for the study intersections was conducted for the 2022 existing conditions, and the results of the analysis are summarized in **Table 6.1** below. Synchro outputs are included in **Appendix D**.

## TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

Based on the results shown in **Table 6.1**, all the movements are currently operating at acceptable LOS C or better during both AM and PM peak hours with max V/C ratios of 0.42 during AM peak hour and 0.49 during PM peak hour.

**Table 6.1 – Intersection Capacity Analysis Results – Existing 2022 Horizon**

### 6.1.3 Analysis Results – Background Traffic Horizons

The Synchro analysis for the study intersections was conducted for the 2024 and 2029 background traffic horizons, and the results of the analysis are summarized in **Table 6.2** and **Table 6.3** below. Synchro outputs are included in **Appendix E**.

Based on the analysis results presented in these tables, all the movements are expected to operate at acceptable LOS C or better during both AM and PM peak hours in the horizon years of 2024 and 2029. In 2029, the max V/C ratios during AM peak hour and during PM peak hour are 0.51 and 0.62, respectively.

## TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

### 6.1.4 Analysis Results –Total Traffic Horizons

The Synchro analysis for three study intersections was conducted for the 2024 and 2029 total traffic horizons. The results of the analysis are summarized in **Table 6.4** and **Table 6.5** below. Synchro outputs are included in **Appendix F**.

Based on the analysis results presented in these tables, all movements are expected to operate at acceptable LOS C or better during AM peak hour and PM peak hour in the horizon years of 2024 and 2029. In 2029, the max V/C ratios during AM peak hour and during PM peak hour are 0.51 and 0.63, respectively.

## 6.2 SITE ACCESS MANAGEMENT ANALYSIS

### 6.2.1 Site Access Spacing Review

Based on TAC Geometric Design Guideline (2017), a typical minimum intersection spacing along arterial roadways is 200 m. The proposed spacing between the site access (unsignalized intersection) and any of the two existing signalized intersections along the Front Road is over 550m which meets the spacing requirements.

### 6.2.2 SITE ACCESS SIGHTLINE REVIEW

An intersection sight distance evaluation at the intersection of proposed sit access and Front Road North was conducted to confirm if there is sufficient sight distance for drivers at this new intersection. Based on TAC's Geometric Design Guide for Canadian Roads, section 9.9.2.3, departure sight triangles for intersections with stop control on the minor road should be considered for three situations:

- Case B1- Left turns from the minor roads
- Case B2- Right turns from the minor roads
- Case F- Left turns from the major roads

Intersection departure sight distance is calculated using equation 9.9.1 from the TAC's Geometric Design Guide for Canadian Roads as outlined below:

## TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

$$ISD = 0.278 * V_{major} * t_g$$

Where;

$ISD$  = Intersection Sight Distance

$V_{major}$  = design speed of roadway (km/h)

$t_g$  = assumed time gap for vehicles to turn from stop onto roadway (s)

The calculated and design sight distances are further summarized in Table 9.9.4, Table 9.9.6, and Table 9.9.12 of the TAC's Guide for different cases. **Table 6-6** below contains a summary of the intersection sight distance requirements for each of the applicable cases.

**Table 6-6- Intersection Sight Distance Summary**

Case	Design Speed	Stopping Sight Distance (m)	Required Intersection Departure Sight Distance (m)	TAC Reference
B1	80	130	170	Table 9.9.4
B2	80	130	145	Table 9.9.6
F	80	130	125	Table 9.9.12

For the proposed site access, although there are some utility poles in the sight triangles (see **Figure 6.1**), they do not block the vision, and there is a clear sight line along both south and north approaches of Front Road North that meets the required sight distances and stopping sight distances.

TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN  
AMHERSTBURG ONTARIO

North of Proposed Intersection

South of Proposed Intersection

**Figure 6.1 –Proposed Intersection Sight Distance**

## TRAFFIC IMPACT STUDY FOR THE PROPOSED RESIDENTIAL SUBDIVISION DEVELOPMENT IN AMHERSTBURG ONTARIO

### 6.2.3 Site Swept Path Analysis

A swept path analysis by using AutoTURN software was conducted to ensure adequate turning radii are provided at the access on Front Road North based on the proposed site plan. A typical fire truck and garbage truck were tested as the design vehicles.

Based on the analysis results, the design vehicles can maneuver on-site with the access provided from Front Road North and no turning-related issues were identified. Swept path reports were included for reference in **Appendix G**.

## 6.3 PARKING REVIEW

In this section, the proposed on-site parking supply was compared with the parking requirements specified in the Town's Zoning By-Law No. 1999-52, Section 3, to ensure that sufficient parking is provided. The required parking spaces based on the Town's Zoning By-Law are presented in **Table 6-7**. Based on the proposed site plan, the development will provide 29 underground parking stalls, as well as 25 surface parking stalls, for the 28 apartment units, which meets the parking requirements.

**Table 6-7 – Parking Standard and Requirements**

Land Use	Parking Rate	Unit	Required Parking Spaces
Apartment Building	1 per unit	28	28
Semi-Detached Dwelling	2 per unit	12	24
Single Detached	2 per unit	1	2

## **7.0 CONCLUSIONS AND RECOMMENDATIONS**

Waterstone Anderdon Development Inc. is proposing to develop a residential subdivision development in the area, which is located east of Front Road N, north of Texas Road, and south of Kingsbridge Dr. in Amherstburg, Essex County, Ontario. This development will include 1 single-family home, 28 apartment units, and 12 semi-detached units (i.e., 6 one-story duplexes). It is expected that this development will be fully built out in 2024 and will generate 17 and 19 trips during AM and PM peak hours, respectively.

According to the analysis results, the followings can be concluded:

- All study intersections are operating at LOS C or better during both AM and PM peak hours of the existing (2022) traffic conditions.
- With full buildout of the proposed development in 2024 and post-development horizon year 2029, all study intersections are anticipated to operate at LOS C or better during both AM and PM peak hours without any operational issues.
- The proposed access spacings relative to nearby intersections are sufficient.
- Adequate sight distance will be provided along both approaches of Front Road North at the proposed site access intersection.
- The proposed access will accommodate design vehicles' turning movements.
- The provided parking stalls will meet the parking demand based on the Town's Zoning By-Law.

Notes

THE LOCATIONS OF UTILITIES AS SHOWN ON THE DRAWINGS ARE IN ACCORDANCE WITH THE MOST CURRENT INFORMATION AVAILABLE FROM THE VARIOUS UTILITIES AND AUTHORITIES CERTIFIED TO BE ACCURATE. THE OBLIGATION LIES UPON THE TENDERER (AND, AFTER ACCEPTANCE OF ANY TENDER, UPON THE CONTRACTOR) TO ASCERTAIN, AT HIS OWN EXPENSE, THE EXACT LOCATION OF EACH UTILITY, AND TO NOTIFY THE ENGINEER IMMEDIATELY OF ANY DISCREPANCIES OR CONFLICTS. NO EXTRA TO THE WORK, OR CLAIM FOR COMPENSATION WILL BE ALLOWED IF IT SHOULD BE DISCOVERED THAT ANY UTILITY IS ACTUALLY LOCATED IN A SITE, LINE OR GRADE THAT IS AT VARIANCE WITH THE SITE, LINE OR GRADE AS SHOWN ON THE DRAWINGS. THE CONTRACTOR SHALL NOT BE HELD RESPONSIBLE TO THE OWNER OF ANY UTILITY FOR DAMAGE DONE TO THAT UTILITY ARISING OUT OF ANY ACT OR NEGLECT BY THE CONTRACTOR, OR ANYONE ACTING UNDER HIS AUTHORITY, DURING THE COURSE OF THE WORK.

#### PIPE BEDDING AND TRENCH BACKFILLING DETAILS

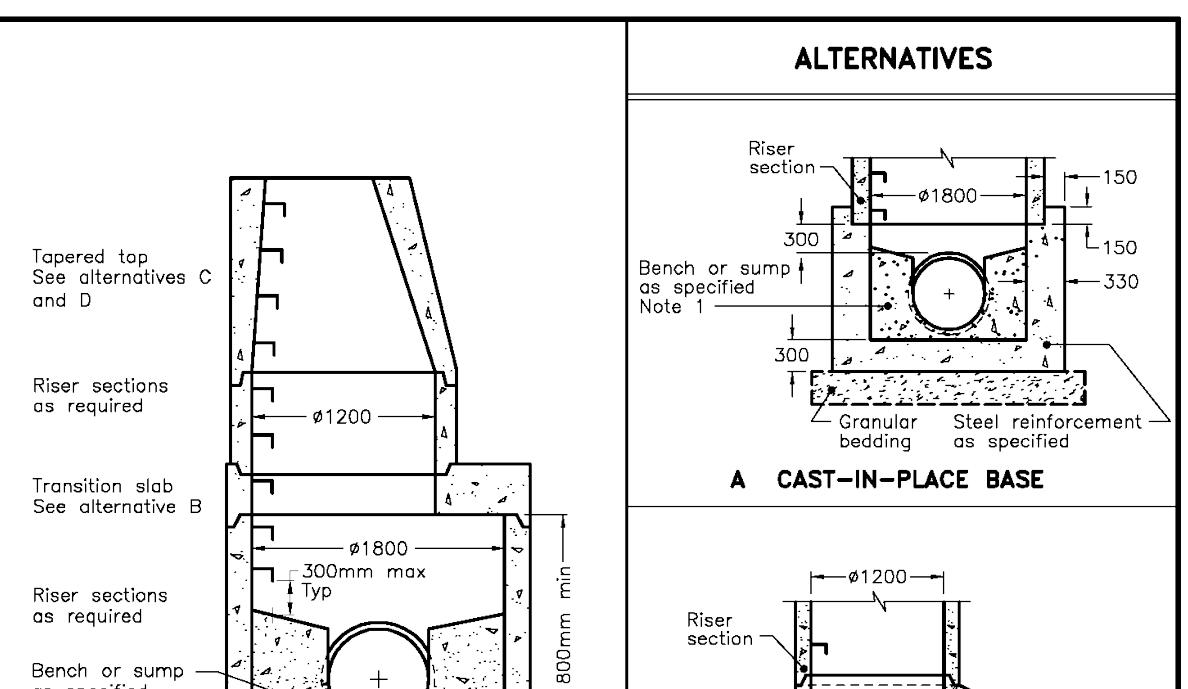

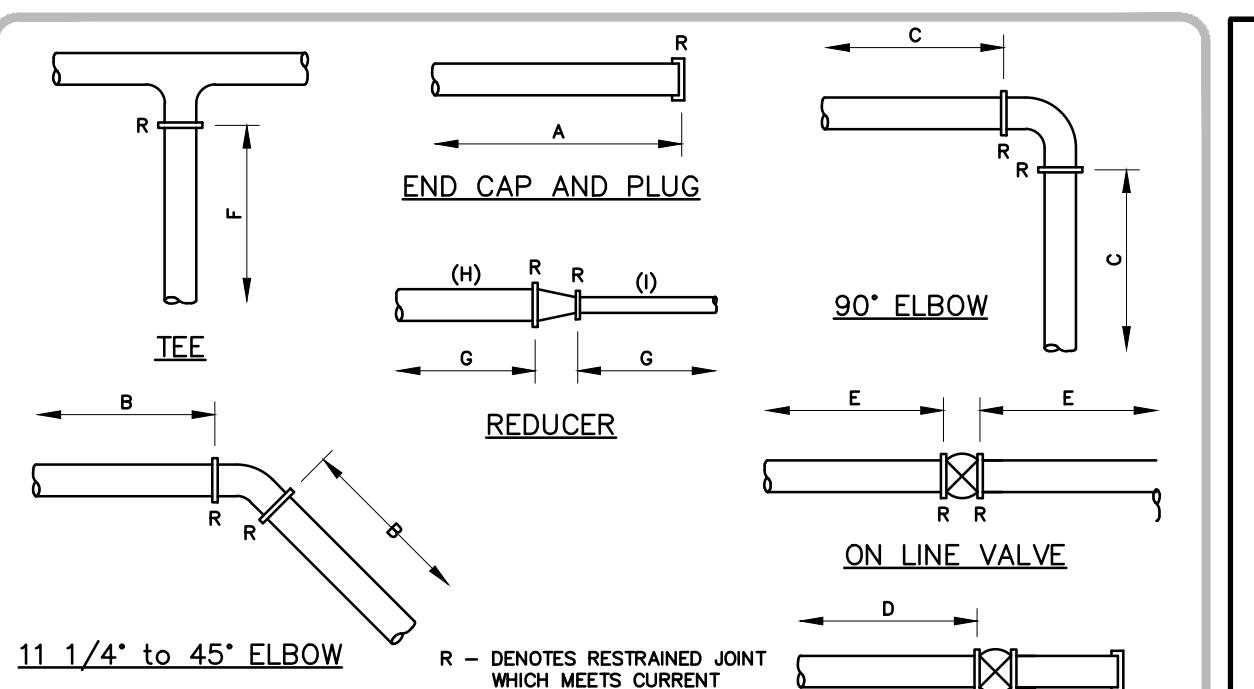

##### NOTES:

- SUPPORT SIDES OF TRENCH EXCAVATION BY APPROVED SHORING METHOD IN ACCORDANCE WITH THE REQUIREMENTS OF THE LATEST OCCUPATIONAL HEALTH AND SAFETY ACT & REGULATIONS FOR CONSTRUCTION PROJECTS.
- WALLS OF TRENCH BOX SHALL NOT EXTEND BELOW SPRING LINE OF SEWER / WATERMAIN PIPE.
- GRANULAR BEDDING MATERIAL TO BE MECHANICALLY COMPACTED AT SPRINGLINE OF WATERMAIN / SEWER PIPE PRIOR TO PLACING GRANULAR COVER MATERIAL.
- TRENCH WIDTH VARIES TO SUIT CONSTRUCTION METHOD AND GROUND CONDITIONS.

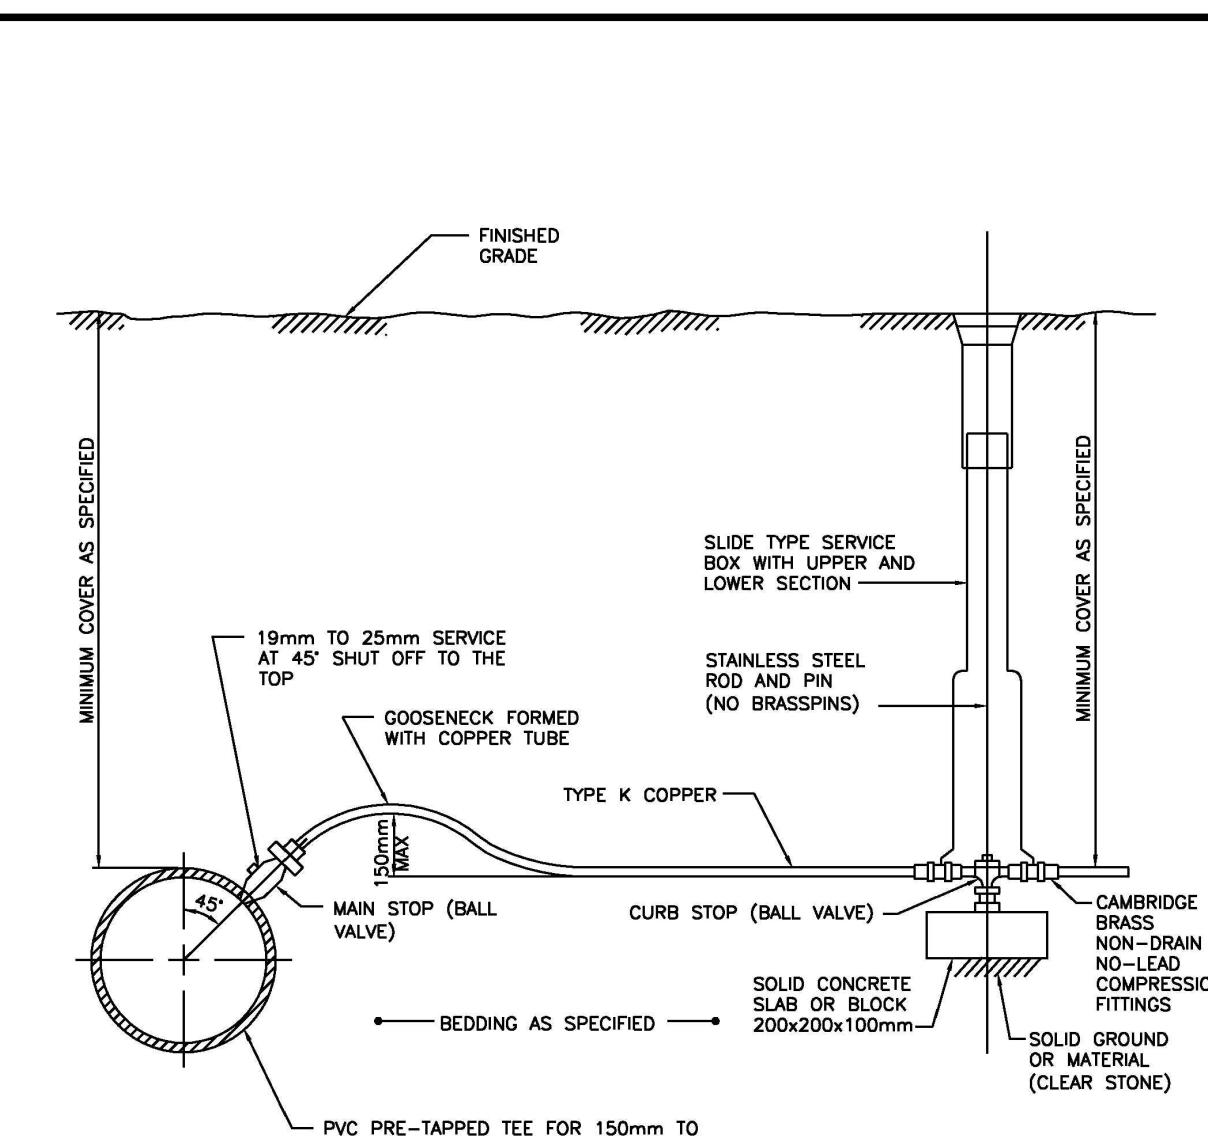

**TYPICAL STANDARD INLET CATCH BASIN AND CONCRETE BOX-OUT DETAILS**

N.T.S.

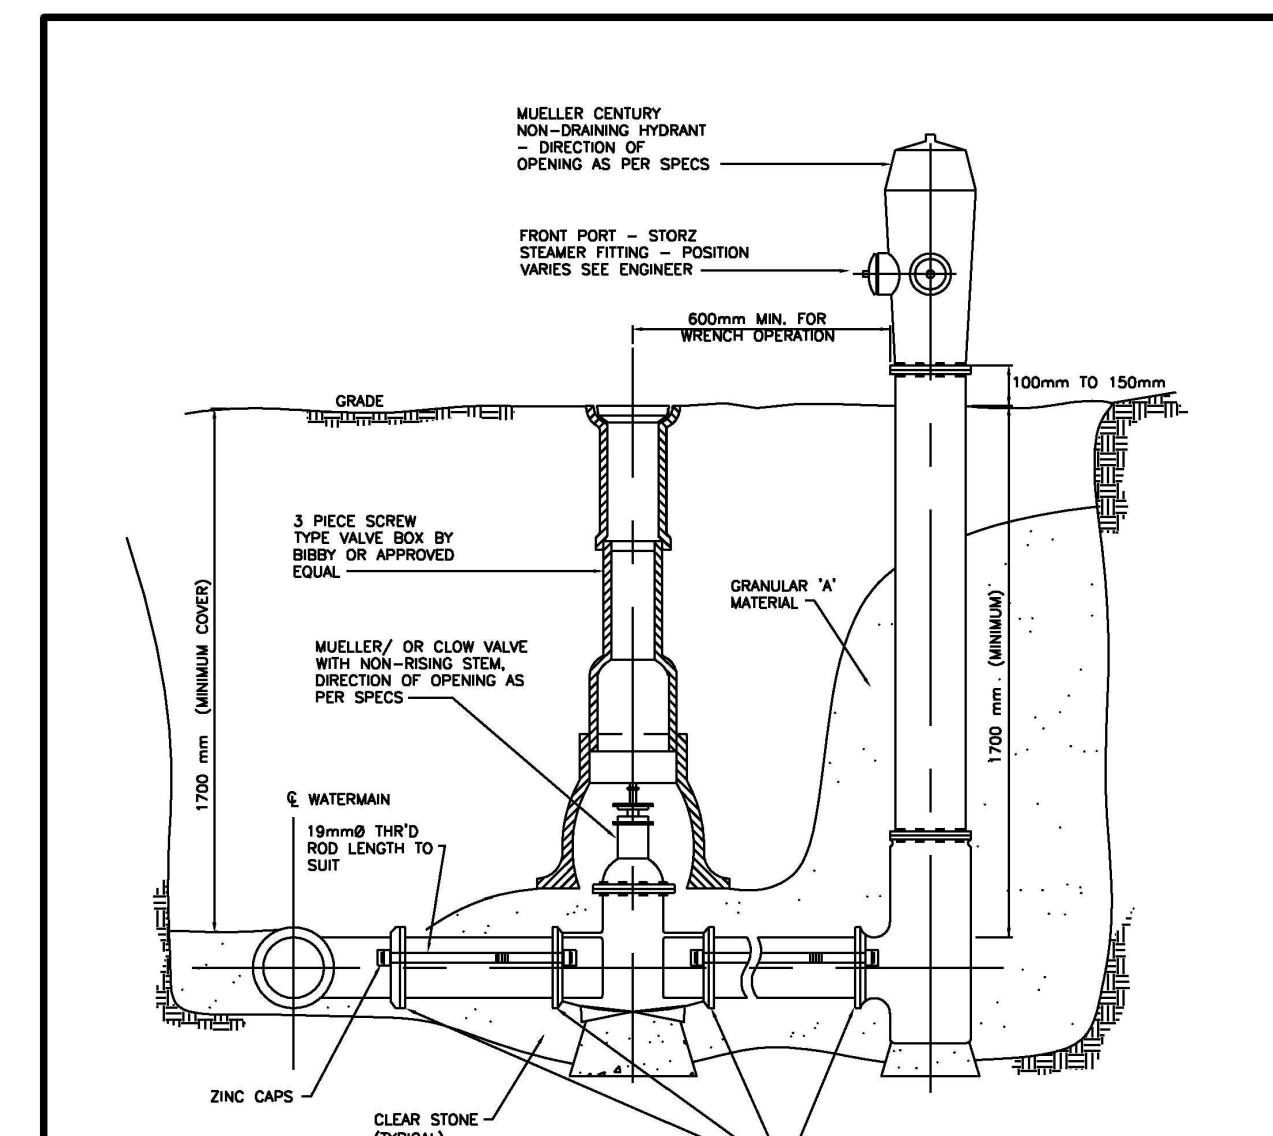

NOTES:  
 1. For sump detail, see OPSD 701.010.  
 2. A Granular backfill shall be placed to a minimum thickness of 300mm all around the maintenance hole.  
 3. Precast concrete components shall be according to OPSD 701.030, 701.031, 701.050, 701.051, 703.012, 703.022, and 706.020.  
 4. Structures exceeding 5.0m in depth shall include safety platform according to OPSD 404.020 or 404.022.  
 5. Pipe support shall be according to OPSD 705.020.  
 6. For benching and pipe opening details, see OPSD 701.021.  
 7. For adjustment unit and frame installation, see OPSD 704.010.  
 8. All dimensions are nominal.  
 9. All dimensions are in millimetres unless otherwise shown.

	Last Revision	01 11 2010

Notes

1. NEW FRAME AND COVERS TO OPSD 400.020 ARE TO BE INSTALLED ON NEW 600x600 CONCRETE CB STRUCTURES.
2. PROVIDE NEW CONCRETE ADJUSTMENT BRICKS AND MORTAR AT NEW AND EXISTING CB STRUCTURES.
3. PROVIDE 200mm DIA. PVC CONNECTION PIPE FOR SINGLE CATCH BASINS AND 250mm DIA. PVC CONNECTION PIPE FOR TWO CATCH BASINS UNLESS OTHERWISE NOTED.
4. FRAME AND COVER TO BE ADJUSTED TO FINISHED ELEVATION PRIOR TO PLACEMENT OF SURFACE ASPHALT.

Time	6.0

The diagram shows the effect of steering angle on the path of a vehicle. The vehicle's center of gravity (CG) is at the top. The front wheel track width is 3.09 m. The rear wheel track width is 2.54 m. The overall width of the vehicle is 3.87 m. The distance between the front and rear axles is 9.70 m. The achieved steering angle is 37.0 degrees. The diagram illustrates various steering angles and their corresponding sweep angles:

Steering Angle	Sweep Angle
30 deg.	20.1 deg.
60 deg.	29.0 deg.
90 deg.	33.1 deg.
120 deg.	35.1 deg.
150 deg.	36.6 deg.
180 deg.	36.6 deg.
