RE: New Water Truck

Attn: Antonella Little

2024 Build\2025MY surcharges:

Due to the current economic environment the truck on order for your business has been moved to production in Calendar 2024 and will be a 2025 Model Year vehicle. This was caused by key component shortages. The vehicle will now be built with a 2024 EPA emissions compliant engine, and will be affected by the increase costs of raw materials, components, labour, fuel, and freight. Extended drivetrain warranties, if included in the package, will be priced higher reflecting higher future costs. The price of the vehicle will be price protected for currency at the time of order, this is a significant saving.

Original Package price of chassis and Body:	\$194,935.00
2025 Model Year Package Price:	\$202,120.00

Note: Taxes etc are extra to pricing above.

Body disclaimer:

Due to rapidly changing raw material pricing, the body price included is subject to change based on material costs until the actual build date at the discretion of the body supplier. Please note that Carrier Truck Centers is not responsible in any way for additional cost/surcharges of the final body price.

Thank you for your understanding of these issues, we appreciate the opportunity to work with you in procuring a new truck in these extraordinary times.

Dan Countryman
Municipal Sales Account Manager
Carrier Truck Centers.
